## MGP Ingredients Showcases Plant-based Solutions at SHIFT20 Virtual Expo

*Offerings include new ProTerra™ textured proteins and Low FODMAP™-certified Fibersym® RW dietary fiber*

**Atchison, KAN., July 13, 2020** — MGP Ingredients, Inc., offers an array of specialty wheat proteins and starches that help food formulators meet consumer demand for healthier, earth-friendly foods. Visit our [virtual exhibitor showcase](#) to connect with MGP experts during the Institute of Food Technologists (IFT) virtual Expo.

MGP's Ingredient Solutions portfolio features a range of products with superior nutritional and functional value, including:

- **ProTerra™ textured proteins.** New textured pea proteins and MGP's proven textured wheat proteins (formerly known as TruTex®) mimic the appearance and fibrous structure of meat. ProTerra is a superior choice for flexitarian and vegan/vegetarian products as well as an extension or partial substitute for meat and faux seafood and poultry applications.
- **Fibersym® RW dietary fiber.** Fibersym, an RS4-type resistant wheat starch, is low FODMAP™ certified by Monash University in Melbourne, Australia. Fibersym is an easy-to-use ingredient that delivers up to 90 percent fiber on a dry basis, an important attribute in products for consumers concerned with digestive health.
- **Arise®** is a high-performance wheat protein isolate that enhances protein quantity and functionality in bread and other bakery products as well as pastas, noodles, batters and breading. The Arise line includes a Clean Label series.

“We’re proud of the quality and innovation behind our products. As important, we collaborate and provide the technical know-how to help turn our ingredients into products that resonate with health-conscious consumers,” said Ody Maningat, PhD., chief science officers and vice president of R&D.
